No

Yes

No

Meet either A, B, or C

A) Close contact* with patient infected with nCoV

B) Stayed in Hubei or Zhejiang, China, within 14 days prior to symptoms onset

C) Close contact* with a person who stayed in Hubei or Zhejiang, China within 14 days prior to symptoms onset

Close contact* with patients infected with nCoV

No

If you have any symptoms, have a rest at home or consult with your primary care doctor

Yes

Yes

Call health center in your town.

No

*Close contact means:

1. Living with the suspected patients or prolonged contact with them (in a car, on an airplane, etc.)
1. Caring for suspected patients without proper PPE
2. Highly likely to have directly touched the patient's sputum or saliva

If you suspect you are infected, first call your local health center (HC) before visiting the hospital. The public health centers will ensure suspected patients will be connected to the proper medical institutions. In some cases, we may ask you to see a general clinic if it is considered appropriate.
